As shown in the table above, our services are covering all the services needed for security, control and monitoring to fit all customer needs.

We have highly qualified engineers and technicians, who can handle site Studies, Site survey, and do the implementations in a professional manner with the shortest time.

Those engineers attended specialized training courses in the manufacturers sites in order to be able to serve our customer in a professional way.

Company Structure

Our company consists of several departments, each department has its Own specialty in providing service to our customers and they all work together as one team:

Sales Department

This department is concerned with sales and after sale service and customer relations, where we inform our customers with the latest information regarding the latest products.

It also coordinates and monitors the sales process from the quotation stage until the completion stage.

This Department provides solutions for time and attendance projects, access control Systems, parking gates control, hand geometry solutions, PVC ID Printers...etc.

Also, this Department provides a total solution of CCTV Systems which contains indoor/outdoor cameras, Control units, storage devices plus fire alarm Systems.

**IT
Department**

The main duty of this Department is to develop and implement all the software applications that are needed in the implemented projects, it contains, time and attendance Systems, HR Systems, inventory control Systems, queuing Systems... etc.

The applications are written under: Oracle, Visual C++, MS SQL server and others..

**Maintenance
& Project
Department**

The main duty of this Department is to make all the necessary maintenance for the sold equipment, as part of the duties is to make the preventive maintenance before any failure occurs during the free maintenance period and this covers all the equipment under maintenance agreements.

We keep enough spare parts for all the equipment that we sell in order to have a very quick response to any failures that might happen.

**Accounting
Department**

This Department handles all the financial related issues that cover bank transactions, preparing bonds, issuing and tracking invoices, tracking tax and customs.

How we provide our services

When we receive request for quotation or proposal (RFP) from a certain customer/client, our engineers study the needs of that customer and we make a field visit to see the environment and locations where we should cover to make sure that we cover the whole site in a professional manner.

Site visit give us a clear vision on the access gates to make sure that our solution is right.

After the site visit, the field engineers study the solution with the managers in a special meeting in the company to come up with the best ideal solution with the best price.

Then diagrams is drawn to show the whole site to make sure of the equipment, cables and other needed items plus the estimated time needed to finish the project.

Then we reach the last stage where we prepare the technical and financial offers taking into consideration offering the best suitable price.

After the implementation is done, we focus on the after-sale service that is covered in the maintenance agreement where we fix any error (if occurred) within a very short period of time as stated in the signed agreement.

We are Business Partner for few International companies Such as:

	<p>File Tracking System. (USA)</p>
	<p>High Definition Surveillance Systems – HDSS. (Canada)</p>
